

More or Less

× 8

Materials: • 2 dice • 2 sets of tokens (different color for each player)

How to Play:

1. Players toss a die. Higher number goes first.
2. Toss 2 dice. Find the sum. Multiply the sum by 8. Say the product out loud.
3. Place a token on a space on the chart. Explain why the product makes the inequality or equation true.
4. If you can't place a token, it's the next player's turn.
5. Player who makes more true statements wins the game.

Example:

Toss 2 and 4.

$$2 + 4 = 6$$

$$6 \times 8 = 48$$

Place a token on the square

"41 < _____"

because 41 is less than 48.

_____ > 5 × 7	41 < _____	64 = _____
77 < _____	_____ < 32	_____ < 4 × 11
40 > _____	_____ = 48	57 < _____
_____ = 56	41 > _____	_____ < 94
49 < _____	_____ = 40	_____ > 16
